

Unfinished Counter

by Fran Casselman

Turn the #76118 Unfinished Counter into a colorful craft storage cabinet!

Use the printies and your own cardstock, plus a little crafting, to create a mini-crafter's dream storage unit.

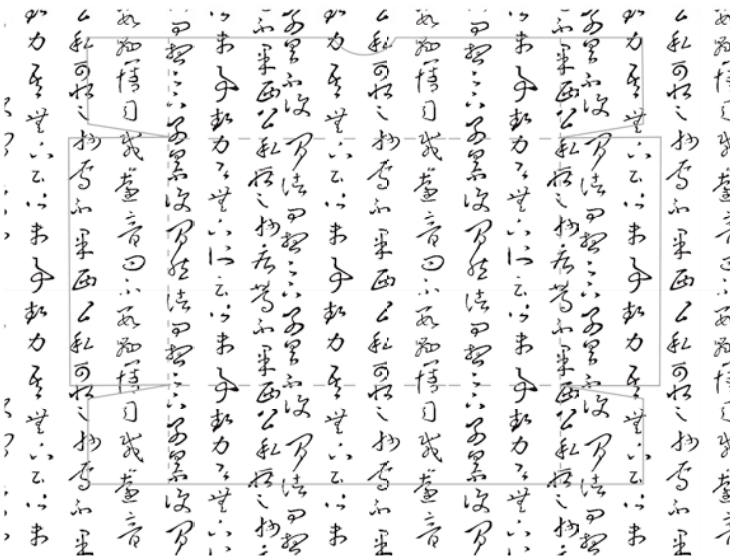

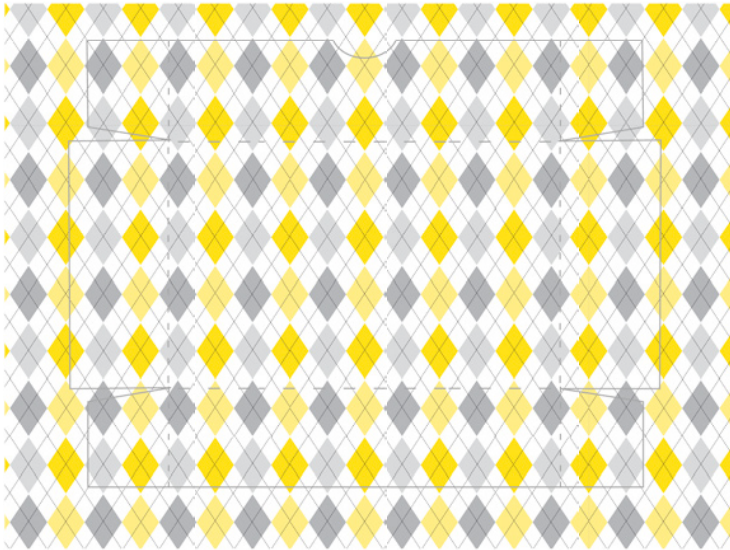

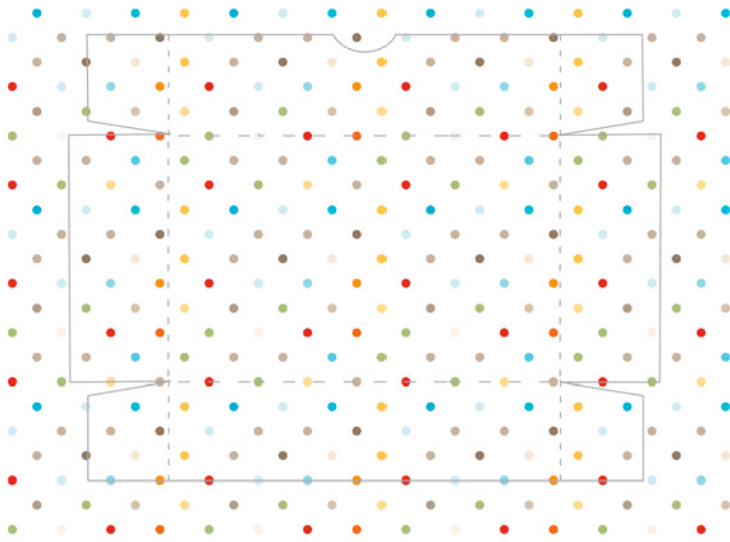

1. Paint or stain the cabinet to suit the décor of your space. The example is stained with #81528 Brown Age-It EASY.
2. Print page A on lightweight white cardstock at your printer's best quality setting. (Photo paper will work, too.)
3. Put the printout back in the printer tray, making sure the print side and top are correctly located for your printer. Print page B.
4. There are light grey drawer outlines on the A side, cut on the solid lines and fold the flaps toward you on the dashed lines. Use glue stick to adhere the tabs inside the drawers. Your drawers are patterned inside and out!
5. For plain white drawer interiors, print page A only and fold the flaps away from you. Glue as above.

Tip: The counter has a decorative trim strip across the back, just under the top. It was fairly easy to pry that off of the sample piece, and it must be removed for the drawers to fit in the top slots. Alternately, you can trim the drawers or choose to leave the top slots open.

Variations: For a set of six matching drawers, you will need to make six printouts. If you prefer the look of drawer pulls or knobs, turn the cutout side of the drawer to the back and glue on lightweight knobs or handles. Good options include #1115, #1112, #12007, #12005, #15545, #1123, #1119, #1110 and #1117 (knobs may require you to make a small hole in the cardstock).
